Introduction

- TAFAXTRA is a coinage from TA (Technical Analysis), FA (Fundamental Analysis), and XTRA (Extra). TAFAXTRA aims at being the go-to source for reliable information in the crypto, forex, and synthetics financial space. We take pride in our ability to provide our users with the latest news in the financial markets, as well as premium technical analysis on different financial assets. What more? TAFAXTRA team is working on a trading bot that will give her users outstanding leverage in trading financial markets via several exchanges and brokers.

Introduction Contd.

- Moreso, understanding and engaging productively in cryptography/cryptocurrency has been quite a difficult venture for newbies despite several innovative ways to simplify same by many developers.

Introduction Contd.

Recently, the upsurge in financial AI programs has been geared towards helping retail traders navigate and have better grasp of the volatile financial markets. A lot of robot applications have been invented with claims of helping people in trading or navigating the financial markets. Nonetheless, a circumspect study into several such AI applications has shown lots of inefficiencies, and most would only focus on one aspect of the financial markets.

Introduction Contd.

The key problems are overt. Robots and several other methods invented have never been all-inclusive, and have little or no bearing on core technical and fundamental analysis. TAFAXTRA hence comes in as a multi-dimensional solution in delivering real-time relevant financial news and hybrid expert technical analysis as well as financial market updates to its users. TAFAXTRA also provides its users with the best hybrid TA-FA-based trading robot for trading several financial markets with several exchanges and brokers.

The Scope

- TAFAXTRA staking with fair monthly yield
- Real-time Crypto, Forex, and Synthetics Trade signal alerts via SMS, emails, and telegram
- TAFAXTRA token (\$TAFA) with several utilities in the TAFAXTRA platform
- Node as a Service (NaaS) system for TAFAXTRA token
- TAFAXTRA token launchpads for several blockchains
- The TafaTaxi Project

TAFAXTRA Staking

The methods are new, but the concept is old. The difference is in the application and how TAFAXTRA has simplified staking in cryptocurrency. TAFAXTRA leverages several low-risk staking platforms and the expertise of a team of proven profitable traders to generate a yield of 15 to 16.5% returns monthly for her users. It's a hybrid system in which the team utilizes years of experience and a complex algorithm that factors in impactful financial news and technical analysis to arrive at profitable trading decisions. USDT is the base asset for staking. In the future, more will be added.

Real-Time Trade Alerts

One big challenge most traders have is access to valuable information such as trading signals from reliable sources. This has left a lot of traders to fall into the hands of several scammers who claim to provide such services but in the end either do not do so, or provide services that ends up making their subscribers lose more money.

Real-Time Trade Alerts Contd.

On the other hand, even while few persons have access to reliable financial tools and signal sources, most times such information does not reach the trader in real-time. For instance, signal groups on telegram, discord, or WhatsApp may generate signals only for the subscriber to see many hours later.

Real-Time Trade Alerts Contd.

What TAFAXTRA has done, is to deliver trusted information and signals on crypto, forex, and synthetics to her subscribed users in real-time, via emails and SMS, as users are more likely to check out their SMS and emails than they would their social media handles.

TAFAXTRA Token (\$TAFA)

TAFAXTRA has developed her token (\$TAFA) on the binance smart chain to leverage on a number of advantages that comes with the chain including wide user base, low gas fees, ease of use and wide exchanges.

TAFA token shall be the primary token for the TAFAXTRA community and will find diverse utilities in the platform including running of nodes as a service, stakings, real-time signals etc. Users who hold the TAFAXTRA tokens will have access to all that TAFAXTRA has to offer.

Future development will focus on providing collateralized and under-collateralized microloans and other advanced and revolutionary ideas, including use cases in the proposed TafaTaxi project.

Node as a Service

Running a node can be challenging, especially when getting started or while scaling fast.

Node as a Service Contd.

While there are several platforms providing users with the Node as a Service (NaaS) system, the adaptability and acceptability are still low especially because of the challenges with the ease of use of such systems.

Node as a Service Contd.

TAFAXTRA hence introduces a very user-friendly interface with high ease of access for users to create nodes and earn node rewards of 0.2 to 0.5% daily for a minimum of 6 months.

TAFAXTRA Launchpad

TAFAXTRA launchpad will provide users with an easy way to access several token ICOs, IDOs, and IFOs on several blockchains and networks.

TAFAXTRA Launchpad Contd.

TAFAXTRA launchpad will be used for ICO of the TAFA token, and thereafter will be used for several other token launches.

TAFAXTRA Launchpad Contd.

The TAFAXTRA launchpad will also facilitate the listing of tokens launched via it in several exchanges across the globe

TafaTaxi Project

The TafaTaxi project has been proposed by the TAFAXTRA team. The project aims at simplifying the technicalities involved with the Taxi business in several countries, especially in Africa. The brainchild is to provide Taxi owners with a system of accurately charging users based on the distance covered with time and remove the challenges involved with the back-and-forth bargaining between taxi owners and their clients, and the sudden increase in taxi prices seen with existing commercial companies providing taxi services. Simply put, TafaTaxi projects proposes standardization in Taxi business across the globe.

Road Map

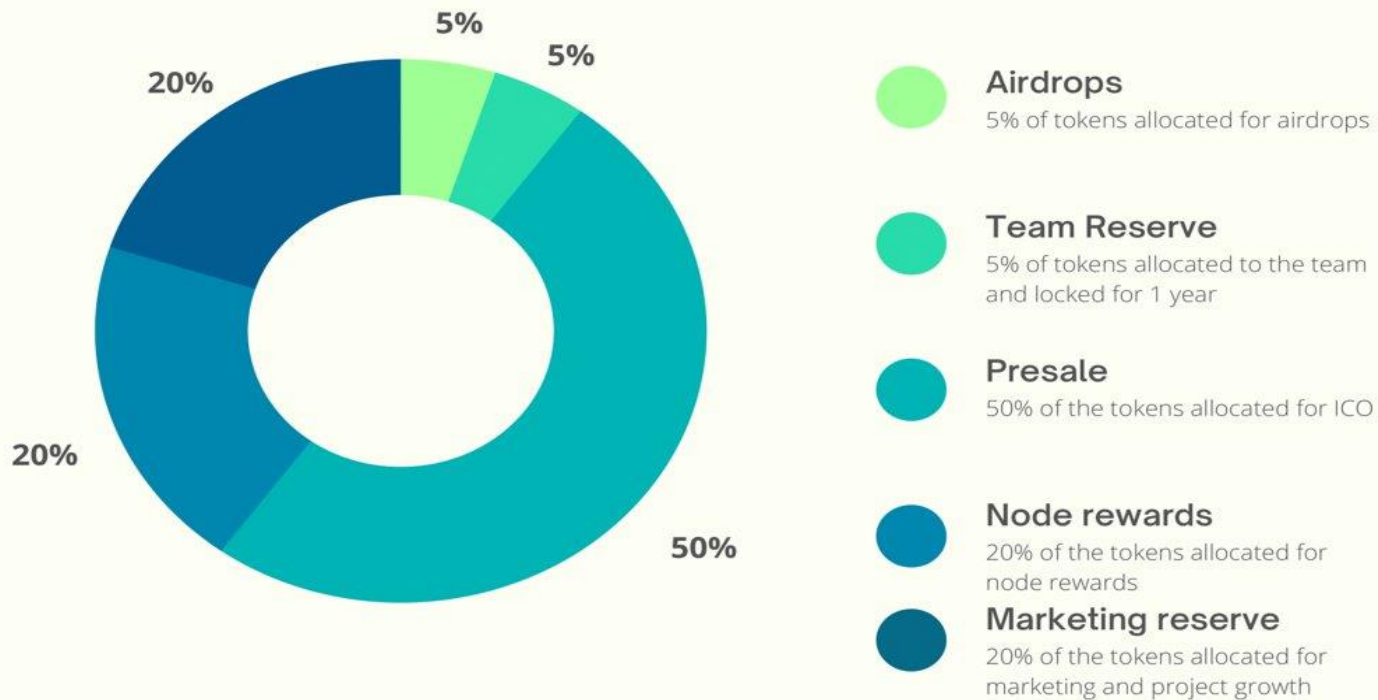

The TAFAXTRA team is open to new ideas capable of enhancing the platform's use for her large community. The team is continuously working and developing in the best interest of her community

TAFAXTRA Tokenomics

Token Economy

- ICO tokens shall be vested for 5 months, with a release of 20% monthly.

- Team reserve shall be vested for 1 year.

Project Summary

- TAFAXTRA is funded partly by private investors, with most funds coming from her token presales and seed rounds.
- All funds will be disbursed in 100% transparent channels and used solely to expand TAFAXTRA services to provide the TAFAXTRA community with the best services.
- All vested tokens will be locked in smart contracts with the initial liquidity provided upon DEX listing. We want to make our token holders feel safe in a trustless system facilitated by blockchain technology.

Social Media

Join our social media handles to keep up to date with our project.

Conclusion

As we continue to make giant strides in the financial market space, it is our hope that our users constantly find our products quite innovative. Also to ensure the success of the project, we have taken very costly but effective steps towards vesting in marketing of the project.
